

## ABSTRACT

A first bush 4 is attached to each of the opposite end parts of a first cylindrical part 14 of a first hinge member 1. Second bushes 5 are attached respectively to the inner end parts of second cylindrical parts 24, 24 which are disposed at the opposite end parts of a second hinge member 2 and to the opposite end parts of a second cylindrical part which is disposed at the central part of the second hinge member 2. The first bush 4 is provided with a protection cylindrical part 43. This protection cylindrical part 43 is fitted to the outer periphery of the first cylindrical part 14. The second bush 5 is provided with a second protection cylindrical part 51. This second protection cylindrical part 51 is fitted to the outer periphery of the second cylindrical part 24.
